VEHICLE INTERDICTION TECHNIQUES

The V.I.T. course takes a critical look at the principles, logistics and realities of interdicting a vehicle while in transit.

Various progressive techniques are examined in a pro / con fashion from an academic viewpoint and then carried out in scripted and opposed formats at real speed. Students will be exposed to various practical means in effectively mitigating the inherent risk of vehicles in motion and the unknown threats they contain. This course will have long days and is very hands on intensive... little is left to the theoretical.
